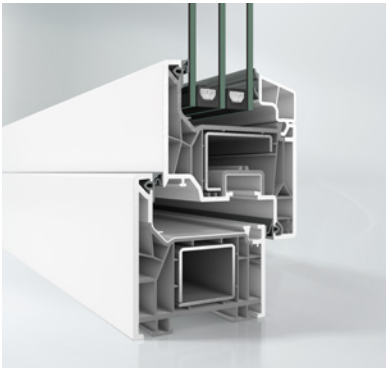
SYSTEM INNOVATION: SCHÜCO FOCUSING

Innovative. Straightforward. Sustainable.



DESIGN MEETS MODERNITY

The new FocusIng profile system sets new standards in design. With its straight, minimalist, and elegant contours, it blends perfectly into modern living styles and creates a timeless, clean look. Less is more - and it shows! Ideal for those who favor a reduced, minimalist style.

HIGH-PERFORMANCE THERMAL INSULATION FOR YOUR HOME

Despite its slim design, the FocusIng profile system provides effective thermal insulation with either a rebate gasket or a centre gasket. Its five- or six-chamber construction helps minimise heat loss, supporting comfortable living conditions and reduced heating energy demand.

DURABILITY AND STABILITY

Robust, long-lasting, and durable – the FocusIng profile system not only offers optical elegance but also the highest level of resilience. It ensures long-term satisfaction and increases the value of your property.

FLEXIBILITY IN DESIGN AND FUNCTION

Whether you prefer large glass thicknesses or a custom color selection – the FocusIng profile system leaves nothing to be desired. The wide range of decorative options gives you the freedom to perfectly match your windows and doors to the style of your dream home.

RESPONSIBLE USE OF RESOURCES

Another key feature of the FocusIng profile system is the use of recycled plastic in the profile core. This allows previously used raw materials to be reused, combining resource-efficient material usage with modern window technology, high quality, and long-lasting materials.
